## 2019 Lung Injury Surveillance Case Definition (CDC) – September 18, 2019

---

**Note:** At this time, Washington is limiting their investigation to *hospitalized cases with severe pulmonary disease*.

### Confirmed

Using an e-cigarette ("vaping") or dabbing\* in 90 days prior to symptom onset

**AND**

Pulmonary infiltrate, such as opacities, on plain film chest radiograph or ground-glass opacities on chest CT

**AND**

Absence of pulmonary infection on initial work-up. Minimum criteria are:

- 1) A negative respiratory viral panel  
**AND**
- 2) A negative influenza PCR or rapid test, if local epidemiology supports influenza testing  
**AND**
- 3) All other clinically-indicated respiratory infectious disease testing (e.g., urine Antigen for *Streptococcus pneumoniae* and *Legionella*, sputum culture if productive cough, bronchoalveolar lavage (BAL) culture if done, blood culture, HIV-related opportunistic respiratory infections if appropriate) are negative

**AND**

No evidence in medical record of alternative plausible diagnoses (e.g., cardiac, rheumatologic, or neoplastic process).

### Probable

Using an e-cigarette ("vaping") or dabbing\* in 90 days prior to symptom onset

**AND**

Pulmonary infiltrate, such as opacities, on plain film chest radiograph or ground-glass opacities on chest CT

**AND**

Infection identified via culture or PCR, but clinical team\*\* believes this infection is not the sole cause of the underlying lung injury **OR** Minimum criteria to rule out pulmonary infection not met (testing not performed) and clinical team\*\* believes infection is not the sole cause of the underlying lung injury

**AND**

No evidence in medical record of alternative plausible diagnoses (e.g., cardiac, rheumatologic, or neoplastic process).

### Footnotes

\* Using an electronic device (e.g., electronic nicotine delivery system (ENDS), electronic cigarette, e-cigarette, vaporizer, vape(s), vape pen, dab pen, or other device) or dabbing to inhale substances (e.g., nicotine, marijuana, THC, THC concentrates, CBD, synthetic cannabinoids, flavorings, or other substances).

\*\*Clinical team caring for the patient.

**Notes:** these case definitions are meant for surveillance and not clinical diagnosis. These case definitions are subject to change and will be updated as additional information becomes available if needed.
